

COVERMATE III OPERATING INSTRUCTIONS

- 1) Open cover and fold in half.
- 2) The best way to lift the cover completely off the spa is to enter the hot tub and push the cover up from the center.
- 3) You can also lift the cover by standing outside the hot tub. Grab on to the bar with the foam grip and start pulling upward. The hydraulic shocks will do most of the work to bring the cover to a fully opened position and lock the cover in place.
- 4) To close the cover from inside the spa, **press on the orange button on the locking shock (the cover will not close if the locking shock is not disengaged)** and pull the cover down until it is resting on the sides of the spa.
- 5) To close the cover from outside the spa, get out of the hot tub and go to the side of the spa that has the locking shock. **The cover will not close if the locking shock is not disengaged** and cover lift damage can occur. **Press on the orange button on the locking shock**, grab on to the bar with the foam grip and pull the cover down until it is resting on the spa.
- 6) The hydraulic shocks will do most of the work to bring the cover to a closed position. Fold the top half of the cover back onto the spa. Position the spa cover on the spa, making sure that all four corners are properly positioned and square on the spa. Lock down your cover to prevent wind damage.
- 7) **Do not use the CoverMate in high wind conditions.** Injury from the spa cover being blown over and impacting the spa user can occur.
